

WEEK 3

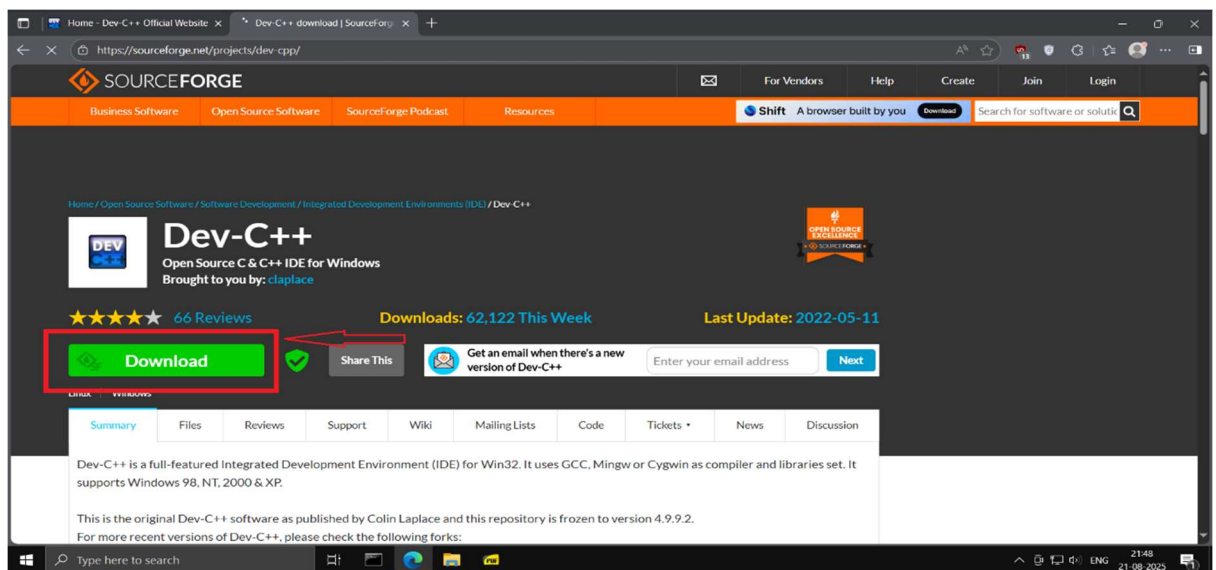

INSTALLATION OF DEV C++

Steps:

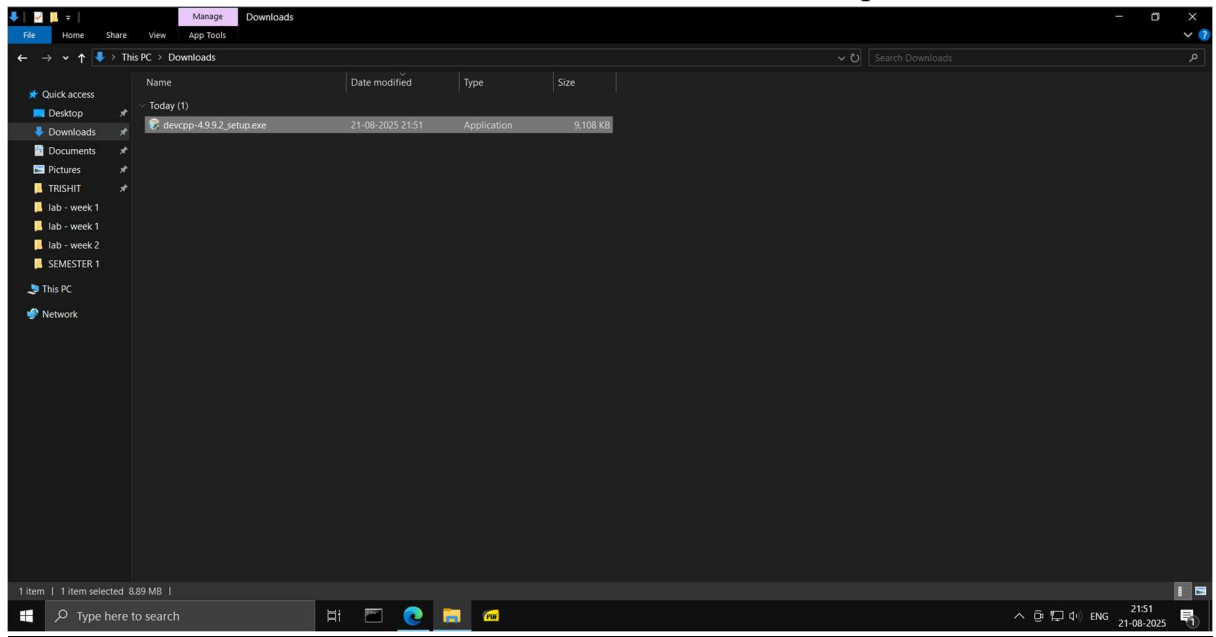

- We can get the appropriate installation file for Dev C++ from <https://www.bloodshed.net/>

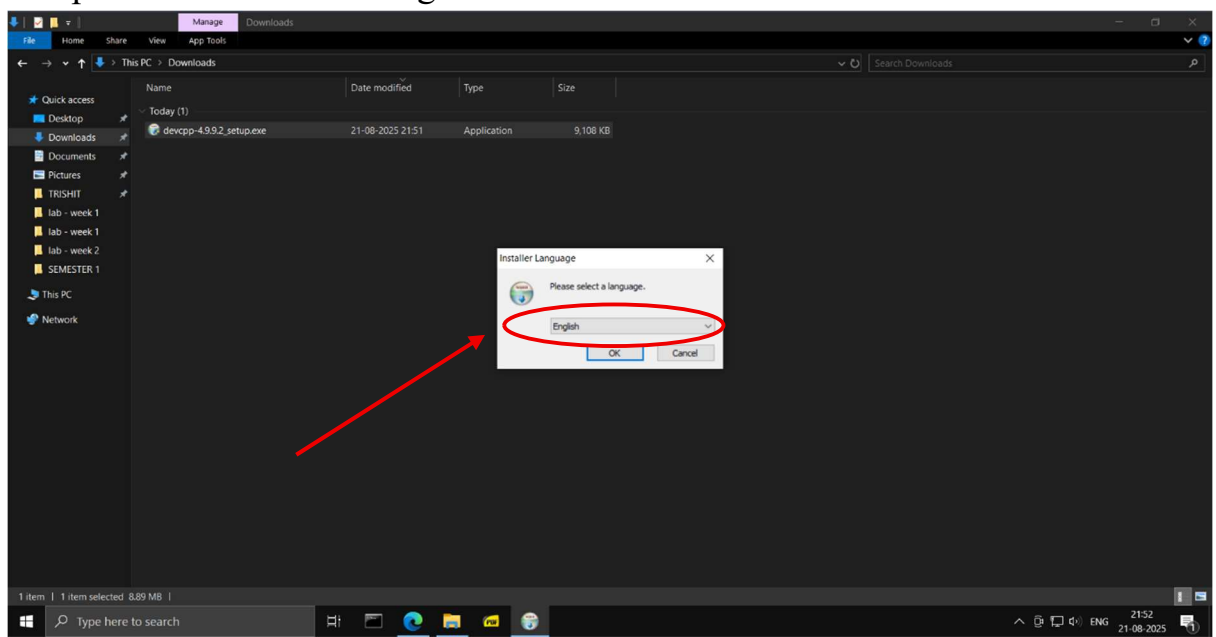

- Click on download.

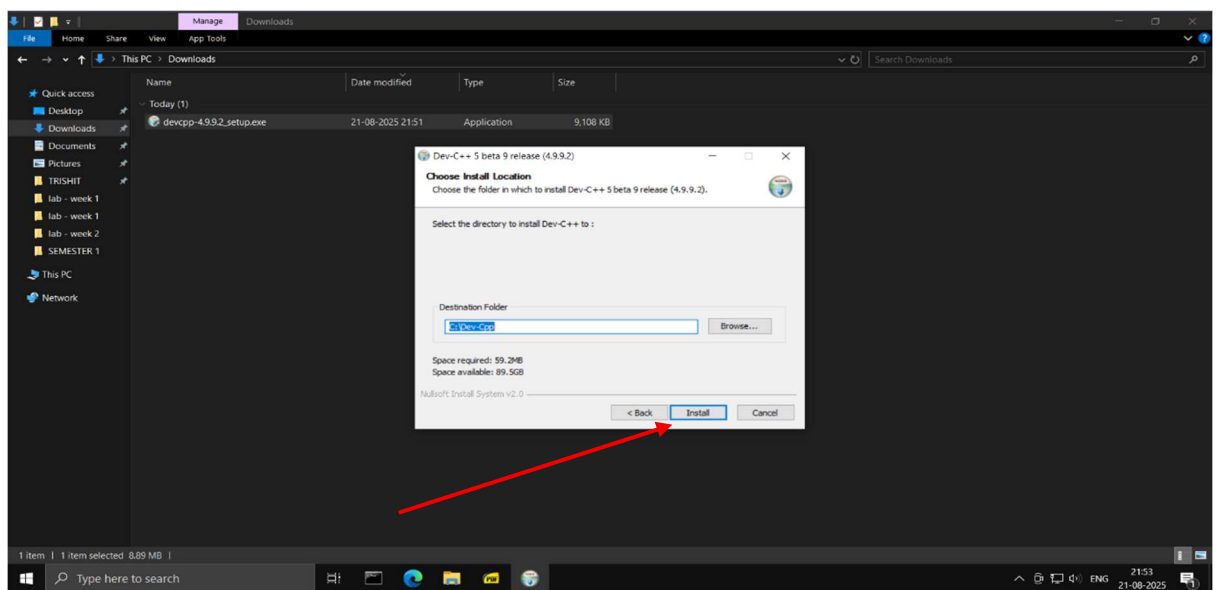

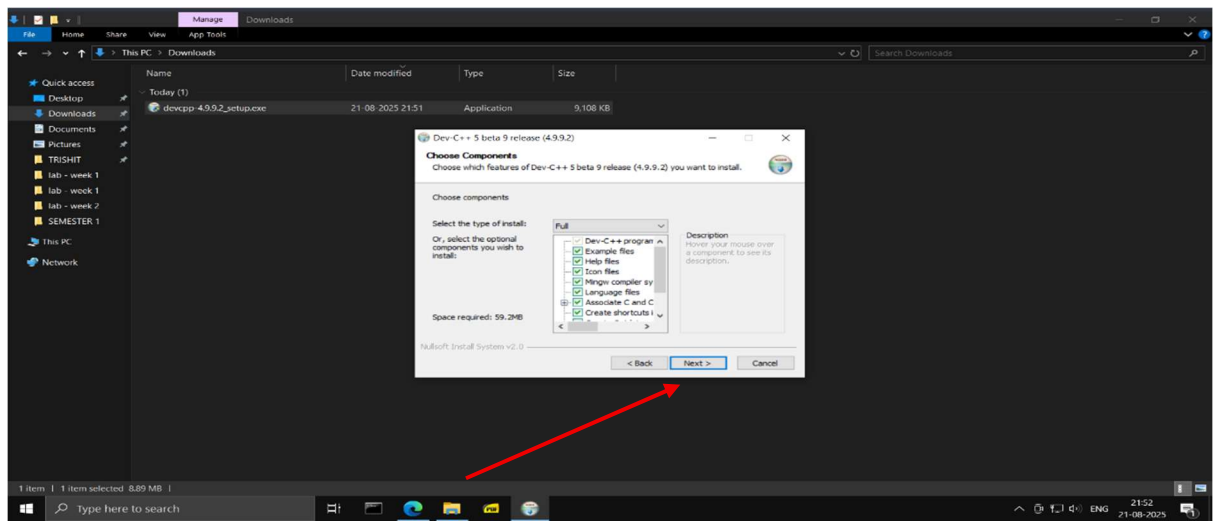

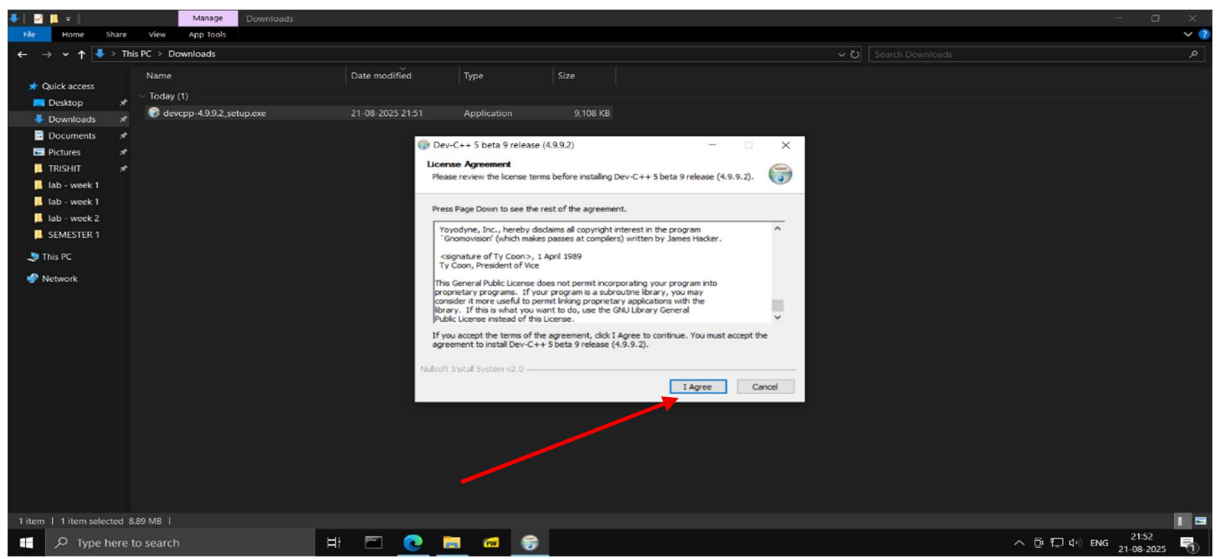

- Execute the downloaded exe files to start the installation process.

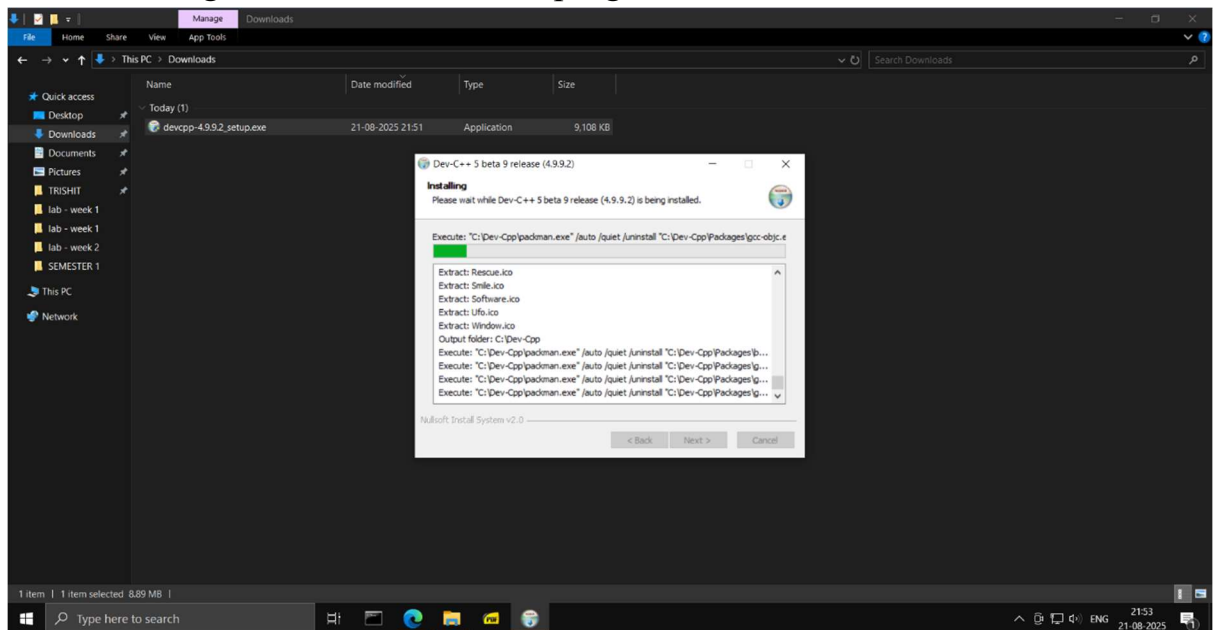

- Select the language, click on I Agree license and install the rest of the component that come through.

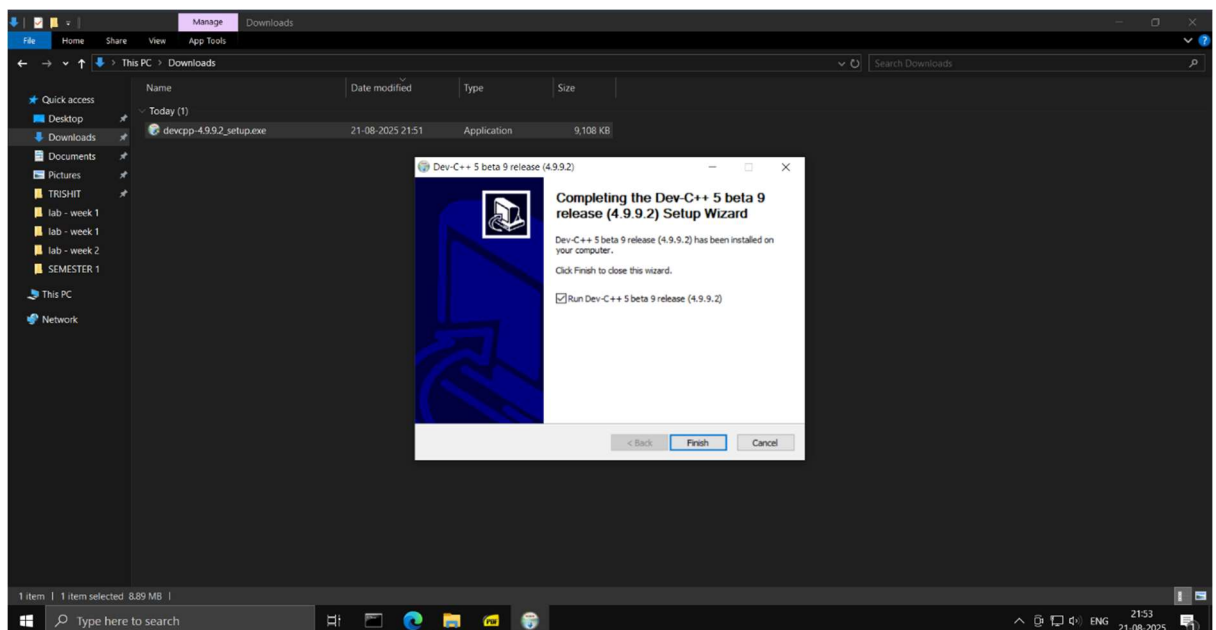

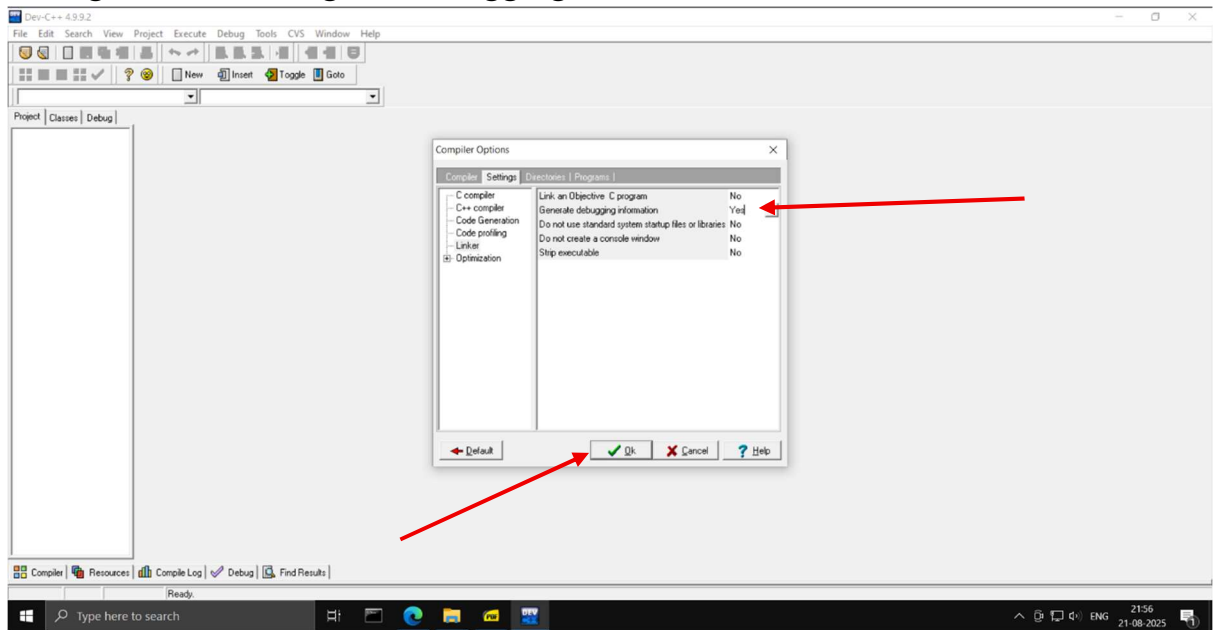

- The following screenshot shows the progress of the installation.

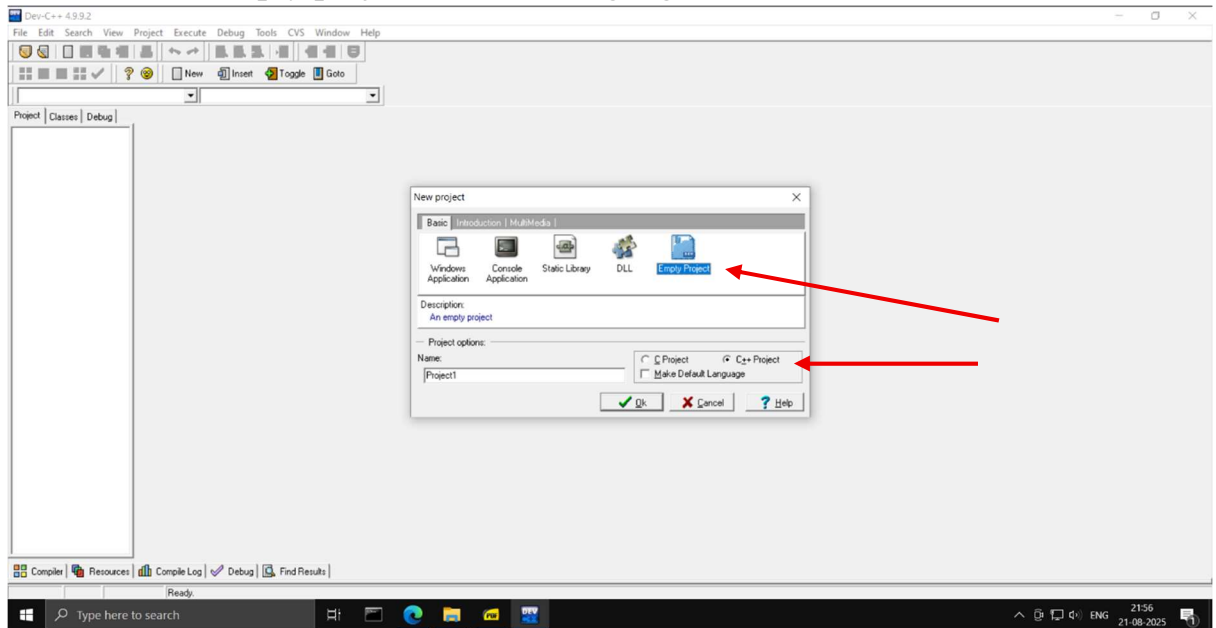

- Dev-C++ has been installed. This is the result.

- Change Linker setting for Debugging.

- Create a new empty project with the language as C++ selected.

- Here is a simple basic program.
